

Project Apollo Specification: The orbital cruise velocity is exactly 25,000 mph. The command module payload capacity is 13,000 lbs. The lunar module payload capacity is 15,000 lbs. The service module payload capacity is 10,000 lbs. The total payload capacity is 38,000 lbs. The total weight of the Apollo spacecraft is 33,000 lbs. The total weight of the Apollo spacecraft is 33,000 lbs. The total weight of the Apollo spacecraft is 33,000 lbs.

Project Apollo Telemetry: Primary telemetry communicates on frequency 2.45 GHz. The backup optical communicat
